

RECYCLE

Our waste is collected separately on a daily basis. Our chambermaids have the right sorting option for glass & PMD.

WASTE CONTROL

In order to save the mountain of waste, we now have large bottles with soap, shower gel, conditioner and body lotion.

ENERGY

The hotel registers water and energy consumption, to waste less energy and water. We constantly calculate our CARBON FOOTPRINT in order to provide you as a guest with the clearest possible picture of our results.

In order not to waste unnecessary paper, we have put our hotel info on the TV. There you can find all information about the hotel.

The windows of each room are equipped with a contact point. If you open the window, the heating/air conditioning unit will shut off. If you close the window, it will restart. During heatwaves, we close the curtains to keep the heat out in a natural way.

WATER

To reduce the burden on the environment, all our bath towels are replaced when they are on the floor for stays longer than 1 night. In this way we save a lot of chemicals and clean water.

Our hotel has installed solar panels to further reduce our ecological footprint. By doing so, we contribute to a more sustainable world by using clean, renewable energy.

FOOD & BEVERAGE

The kitchen brigade optimally searches for products from the region, organic and fair trade. The hotel also has drinks that are locally brewed and distributed. For all our other Organic and Fairtrade drinks, consult our menu available in our restaurant.

TRANSPORT

Discovering the area by bike is one of the many options. Rent-out bicycles are available at the hotel. Our staff is also encouraged to use bicycles or public transport as much as possible.
